

RIFT CUT TEXTURED FIBERGLASS DOORS

ONE GRAIN. ANY STAIN.

Virtually indistinguishable from the true article, the process begins by constructing an actual wood door and transferring the authentic graining to our unique line of Rift Cut doors. The natural wood graining enables versatility to showcase any stain.

CONSISTENT AND UNIFORM APPEARANCE

- **STRAIGHT GRAIN** – Rift sawing produces a straight, linear grain pattern, unlike the wavy or cathedral patterns of plain-sawn lumber.
- **UNIFORMITY** – This consistent grain pattern creates a more uniform and visually appealing appearance throughout the door.
